Proletema 8.6: Dim penetul C(10, -8) se duc tangente la llipsa  $\frac{x^2}{25} + \frac{y^2}{16} = 1$ Determinati lcuatia coardei care meste puntele de contact.

## Solutie:

Soriem ecuatea tangentei printe-un punct (xo, yo) al elipsei, prin dedulelare.

Avem: 
$$\frac{x \cdot x_0}{\alpha^2} + \frac{y \cdot y_0}{\ell^2} = 1 = \frac{x \cdot x_0}{25} + \frac{y \cdot y_0}{\ell^2} = 1$$
 (1)

Stim ca tangentele trec prin punctul ((10,-8)=)

=) (1) Levime 
$$\frac{10 \times 6}{25} + \frac{(-9 \times 90)}{16} = 1 = 1 = \frac{2 \times 0}{5} - \frac{90}{2} = 1 = 1$$

Oletenen sistemul: 
$$\int \frac{4x_0 - 5y_0 - 10 = 0}{\frac{x_0^2}{25} + \frac{y_0^2}{16} = 1}$$

$$= \frac{x_0}{25} + \frac{y_0^2}{16} = 1$$

Inlocuind pe xo în cea de-a doua ecuatie =)
$$= \frac{5(y_0 + 2)}{25} + \frac{y_0^2}{16} = 1 = \frac{25}{16} \cdot (y_0^2 + 4y_0 + 4) + \frac{y_0^2}{16} = 1 = 1$$

=) 2yo + 4go +9 = 16 =) 2yo +4 go -12 = 0.

Salutile ecuatiei go + 2 go -6 = 0 sont g1=-1-17 si g2=17-1.

Pt  $y = -1 - \sqrt{7} \Rightarrow x = \frac{5(1 - \sqrt{7})}{4} \Rightarrow A(\frac{5(1 - \sqrt{7})}{4}, -1 - \sqrt{7})$  esto unul den puntele de contact.

Pt.  $y = \sqrt{7} - (=) x = \frac{5(\sqrt{7} + 1)}{9} \Rightarrow B(\frac{5(\sqrt{7} + 1)}{9}) \sqrt{7} + 1) \text{ este}$ 

Pt. y = 1+ -1.

celalalt penot de contact.

Ecuația coardei este  $\frac{x - 5 - 5\sqrt{7}}{5\sqrt{7} + 5} = \frac{y + 1 + \sqrt{7}}{\sqrt{7}} = \frac{y + 1 + \sqrt{7}}{\sqrt{7} + \sqrt{7}} = \frac{y + 1 + \sqrt{7}}{\sqrt{7}} = \frac{y + 1 + \sqrt{7}}{\sqrt{7}}$ 

 $(3) \frac{x - \frac{5 - 517}{4}}{\frac{1017}{1017}} = \frac{9 + 1 + 17}{217} (3) \frac{9}{1017} (3) \frac{4}{1017} = \frac{9 + 1 + 17}{217} (3) \frac{1}{1017}$ 

=)  $\frac{9x - 5 + 5\sqrt{7}}{5} = 9 + 1 + \sqrt{7} = 9x - 5 + 5\sqrt{7} = 5y + 5 + 5\sqrt{7}$ 

€ 4x -5 y -10 = 0.

Im conclusiei, louateu coardei care meste punctele de contact este 4 x - 5 g -10 =0.
